AzerothCore mod-playerbot Comprehensive Guide

A highly legible formatting reference sheet for bot strategies, combat rules, and whisper macros.

1. Combat (co), Non-Combat (nc), & Dead Strategies

These configuration flags toggle automated states governing how your bot acts dynamically on its own.

Core Roles & Combat Rules

• **accept all quests / quest**: Automatically accepts all available quests from a targeted NPC.

• **adds**: Instructs the bot to proactively scan for and manage extra enemies joining the fight.

• **aggressive**: Puts the bot in an aggressive stance, attacking enemies on sight.

• **attack tagged**: Tells the bot to attack targets already engaged by other players.

• **avoid aoe / baoe**: Instructs the bot to actively move out of Area of Effect (AoE) hazard spells on the ground.

• **collision**: Enables or disables pathfinding terrain collision checks for the bot.

• **cc**: Enables Crowd Control abilities (e.g., Polymorph, Fear) on secondary targets.

• **default**: Resets the bot's combat rules to its base class default setup.

• **dps / healer dps**: **dps** prioritizes standard damage output. **healer dps** forces a healing spec bot to cast damage spells when no healing is required.

• **dps aoe / dps assist**: **dps aoe** triggers multi-target cleave/AoE spells. **dps assist** forces the bot to perfectly mirror the main asset's target.

• **flee / flee from adds**: Causes the bot to instantly drop what it's doing and run back to the master.

• **focus / focus heal targets**: Forces dedicated focus target tracking, ensuring specific high-priority targets receive immediate heals.

• **force rebuff**: Forces the bot to refresh class buffs even if they haven't expired yet.

• **heal / offheal**: **heal** focuses entirely on keeping the party alive. **offheal** allows pure DPS/hybrid classes to cast backup heals if the main healer is struggling.

• **kite / runaway**: Instructs ranged or low-health bots to physically backtrack or loop away from approaching enemies.

• **passive**: Commands the bot to stop all hostile actions and strictly stand by.

• **pull / pull back**: Initiates a structured pull sequence, often dragging a targeted enemy back to the player's group location.

• **ranged**: Forces the bot to maximize visual distance from the target and use ranged attacks.

• **save mana**: Alters spell priority to consume less resource pool, favoring highly efficient casts.

• **tank / tank assist / tank face**: **tank** commands the bot to actively generate threat. **tank assist** helps secondary tanks follow the primary target. **tank face** positions the enemy facing away from the group.

• **threat**: Triggers threat-reduction abilities (like Feign Death or Fade) if the bot pulls aggro.

• **wait for attack**: Restrains the bot from damaging an enemy until the main tank establishes safe threat levels.

Class Blessings, Auras, & Resistance Buffs

• **bkings / bmight / bsanc / bwisdom**: Paladin blessing overrides (Blessing of Kings, Might, Sanctuary, Wisdom).

• **rfire / rfrost / rshadow**: Resistance-focused configurations (Fire, Frost, Shadow) where bots prioritize corresponding protection buffs or gear.

• **barmor / bspeed / bthreat**: Buff optimization choices balancing armor enhancements, speed mechanics, or threat modifiers.

Movement, Gathering, & Automation

• **follow / stay / close**: **follow** links the bot's movements to you. **stay** roots them in place. **close** keeps their follow distance extremely tight.

• **formation**: Instructs bots to move into organized radial arrangements (e.g., arrow, circle) around the leader.

• **food / potions**: Allows the bot to autonomously consume food, water, or potions when health or mana drops out of combat.

• **gather**: Automatically harvests nearby nodes (Mining, Herbalism, Skinning).

• **grind**: Sweeps the immediate landscape, attacking and killing any eligible mob nearby for XP/loot.

• **loot**: Dictates automatic corpse-looting behavior.

• **master fishing / use bobber**: Commands the bot to cast a fishing line and click the floating bobber to catch fish.

• **mount**: Forces the bot to use a ground or flying mount to keep pace with the player.

• **move from group / move random**: **move from group** separates a bot to minimize proximity mechanics. **move random** makes the bot wander idly.

• **rpg / new rpg**: Activates an immersive ambient AI state where the bot autonomously walks into towns, talks to NPCs, repairs, trades, and behaves like a real human player.

• **travel**: Directs the bot to travel long distances across world zones to meet objectives.

Battleground (bg) & Raid Specific Strategies

• **alterac, arathi, warsong, arena, battleground, bg, isle**: Configures behaviors for PvP Battlegrounds and Arenas (capping flags, defending nodes, targeting healers).

• **aq20, blacktemple, bwl, gruulslair, hyjal, icc, karazhan, magtheridon, moltencore, naxx, onyxia, ssc, tempestkeep, ulduar, voa, zulaman**: Instructs the bot to load custom dungeon/raid behaviors specifically tailored for bosses in those zones.

• **tbc-* / wotlk-***: Sub-instance scripts targeting specific Burning Crusade and Wrath of the Lich King 5-man dungeons.

Utility & Troubleshooting

• **cast time**: Adjusts how bots handle spell queueing based on remaining spell cast durations.

• **chat / guild / lfg**: Enables or disables bot responses and system declarations across custom chat channels.

• **debug / debug move / debug quest / debug rpg / debug spell**: Spits tracking data directly into the server logs to diagnose broken pathing, quests, or spell loops.

• **duel / start duel**: Initiates a duel mechanics system between the master or other bots.

• **emote**: Allows the bot to respond with animations or flavor emotes dynamically.

• **explore**: Commands the bot to run into unexplored fog-of-war map areas to clear map achievements.

• **mark rti**: Automatically places target markers (Skull, Cross, etc.) on aggressive targets.

• **maintenance**: Triggers an automated sequence where the bot gems, enchants, repairs, and stocks up on class reagents/consumables.

• **map / map full**: Transmits grid coordinates or fully mapped visual details back to the master.

• **ready check**: Responds affirmatively to party ready-checks.

• **return / reveal**: **return** forces the bot to abort current tracking and pull back. **reveal** exposes stealth units or maps out stealth parameters.

• **rtsc**: Real-Time Strategy Control modification variables.

• **sit**: Forces the bot to sit down (often used to force health/mana regeneration).

• **tell target**: Whispers the bot's current target name directly to the player.

• **worldbuff**: Commands the bot to seek out and acquire relevant world enhancements.

2. Whisper Commands

Whispering these strings directly to a bot commands them to instantly perform a specific, isolated task.

• **add all loot / [item] link / [quest] link / [object] link**: **add all loot** forces immediate group cleanup. Linking an item/quest evaluates if the bot wants or needs it.

• **attack my target / pull my target / pull rti target**: Straightforward combat acquisition targeting overrides.

• **aura / stance**: Modifies underlying passive buffs like Paladin Auras, Death Knight Presences, or Warrior Stances.

• **autogear / autogear bis**: Instructs the bot to scan its bags and automatically equip superior item level or Best-in-Slot (BiS) gear upgrades.

• **bank / gb**: Interacts directly with the standard character bank or guild bank interface.

• **buff**: Triggers an immediate manual sweep to cast missing class buffs on party members.

• **buy / sell / trade / wts**: Controls trading loops with vendors or players.

• **calc**: Requests mathematical stat projections from the bot's gear setup.

• **cast custom spell / cast custom nc spell / spell / spells / cast [spell]**: Commands the bot to show available spells or explicitly execute a targeted action.

• **cdebug**: Developer combat-system debugging flags.

• **cheat**: Toggles server-side helper options if permissions allow.

• **clean quest log**: Abandons gray or obsolete quests cluttering up its memory slots.

• **co / nc / ss**: Short status checks or manual configuration switches for combat, non-combat, or soulstone configurations.

• **craft / de**: **craft** forces execution of professions (e.g., cooking or blacksmithing). **de** targets item objects for Disenchanting.

• **cs / drop**: Drops or clears current target tracking arrays.

• **destroy**: Purges a specified junk item from the bot's inventory.

• **emblems**: Displays the current count of PvE tokens in their currency pane.

• **equip / equip upgrade / unequip**: Dictates inventory management.

• **flag**: Toggles the bot's PvP flag status.

• **ginvite / give leader**: **ginvite** makes the bot issue a guild invite. **give leader** passes crown authority to the master player.

• **glyph equip / glyphs / remove glyph**: Manages the bot's specialized talent glyph slots.

• **go / position**: Commands the bot to move to a targeted location on the ground.

• **gossip hello**: Simulates clicking an NPC to open their initial dialogue pane.

• **guild demote / guild leave / guild promote / guild remove**: Administrative guild commands the bot handles if it holds proper permissions.

• **help / query item usage / query quest**: Returns instructional readouts regarding what the bot can do with specific quest items.

• **hire / home**: **hire** handles recruitment options. **home** binds the bot's Hearthstone to the current innkeeper.

• **invite / join / leave / lfg**: Group management commands to control party layout.

• **item count**: Reports the current total of a specific resource or item inside its bags.

• **ll**: Directs loot filtering parameters (e.g., ll gray to only collect vendor trash).

• **log**: Returns tracking printouts of recent activities or combat decisions.

• **los**: Returns a text list of everything currently visible in the bot's Line of Sight.

• **mail / sendmail**: Accesses postal options to clear out inventory space or pass items.

• **open items**: Opens locked containers, clams, or bags found within the inventory.

• **pet / pet attack / tame**: Specialized handlers for Hunters and Warlocks to manage their secondary combat entities.

• **quests**: Displays a comprehensive listing of the bot's current quest log tracking statuses.

• **range**: Displays or changes the preferred operational distance the bot tries to maintain from its target.

• **release / repop / spirit healer**: Dead state commands to release to a graveyard, accept a resurrect sickness penalty, or control ghost movement.

• **repair**: Orders the bot to spend gold repairing its damaged armor array at a vendor.

• **reputation**: Reports faction standing values directly to the chat window.

• **reset botAI / reset**: **reset botAI** flushes modified behaviors back to default. **reset** cancels its immediate casting or stuck movement loop.

• **reward**: Chooses a quest reward item and completes the quest turn-in loop.

• **roll**: Commands the bot to roll a random number from 1-100 or participate in loot distribution passes.

• **rpg do quest / rpg status**: Forces the bot to explicitly look for local quest steps while in its ambient RPG mode.

• **rti**: Sets up specific Target Icon interaction rules (e.g., only attack targets marked with a Star).

• **share**: Shares a compatible quest from the bot's log directly to your quest book.

• **stats / stats summary**: Displays total inventory contents, current gold totals, and character experience data.

• **summon**: Calls the bot directly to your exact physical location.

• **talents**: Shows the current talent build allocation or changes specs.

• **taxi**: Commands the bot to interact with a flight master and fly alongside you.

• **teleport**: If available via developer permissions or GM commands, teleports the bot.

• **tell attackers / tell estimated dps / tell pvp stats**: Requests real-time operational feedback reports from the bot's internal tracking counters.

• **trainer**: Shows available skills or purchases upgrades from a class trainer.

• **unlock items / unlock traded item**: Resolves security check states when dealing with trades between items.

• **use**: Forces the bot to use a specific inventory item, trinket, or consumable.

• **wait for attack time**: Dictates the exact timeframe delay the bot abides by before jumping into a pull.

• **who**: Displays character level and class data parameters.

• **wipe**: Commands the entire bot array to instantly die or reset to cleanly clear out an active dungeon encounter failure.

• **Shortcut commands (* chat shortcut)**: Rapid macro-friendly shortcuts used by bot control addons (like Playerbot Manager) to change profiles on the fly without typing long paragraphs.
